Notice of Allowability

Claims 1-16, 18, 20-22, 24-28, 30 and 31 are pending in the present application.

Allowable Subject Matter

Claim 1-16, 18, 20-22, 24-28, 30 and 31 are allowed. The previous office action dated April 25, 2005 included reasons for allowance of claims 1-16, 30 and 31, and further included objections to claims 18, 20-22 and 24-28 for containing allowable subject matter. The Examiner notes that the Applicant has amended claims 18, 20-21 and 24 to include the allowable subject matter of claims 17, 19, 23 and 29. The Applicant's amendments thus place the application in condition for allowance.

The following statements indicate the reasons for allowance. The closest prior art Banker et al. (U.S. Patent No. 6,426,947) performs an automatic topology discovery mechanism that uses a broadcast probe to learn network node information. Banker does not disclose sending a probe from a new node as recited in independent claims 1, 16, 18, 20-21, 24 and 30-31. A second reference Oppenheimer was applied previously to reject certain claims, however, Oppenheimer and Banker taken individually or in combination do not teach certain features recited in each of the currently pending independent claims, as noted below.

Regarding claim 1, none of the cited references taken individually or in combination, teach or suggest all of the features recited in steps (a)-(k).

Regarding claims 2-16, these claims are allowed by virtue of their dependency on claim 1.

Regarding claim 18, step (g), in combination with the other claimed features, recites features that are novel over the prior art cited to record.

Regarding claims 20-21, the suspending operation), in combination with the other claimed features, recites features that are novel over the prior art cited to record.

Regarding claim 22, this claim is allowed by virtue of dependency on claim 21.

Regarding claim 24, steps (f-g), particularly, "incrementing the current processor...with the current processor number in all other nodes that have not yet replied with a discovery initiation packet", in combination with the other claimed features, recites features that are novel over the prior art cited to record.

Regarding claims 25-28, these claims are allowed by virtue of dependency on claim 24.

Regarding claim 30 none of the cited references taken individually or in combination, teach or suggest all of the features recited in steps (a)-(h).

Regarding claim 31 none of the cited references taken individually or in combination, teach or suggest all of the features recited in steps (a)-(j).
